HYGIENE GROUP PRESS RELEASE

THE GREEN SOLUTION TO BACTERIA SPREAD

Hygiene Group has been selected by leading terminal sanitation expert Byotrol Technology Ltd to supply its new ground-breaking, environmentally friendly range of anti-microbial products.

Terminal sanitisation products are used after cleaning to provide additional protection to equipment and surfaces in any environment where the spread of bacteria could be harmful.

Traditional products of this kind last only a few minutes, but the Byotrol range of biocides – originally developed as a response to the spread of hospital bugs such as MRSA – offers protection for days and even weeks.

It is hostile to microbes but extremely gentle on people – making it ideal for environments where food is produced or handled – and is the first product of its kind to be biodegradable. A further advantage is that it requires no special storage or disposal procedures. It has been approved by Marks & Spencer and also meets EN1276, EN1500, EN1650 and EN13704 performance standards.

Hygiene Group Managing Director Steve Bailey commented: “To date, terminal sanitisation products have had limited impact. Now, however, Byotrol can deliver long-lasting protection to food production and handling facilities, with unrivalled performance and environmental advantages too. It’s a product which we see as adding significant value to our service offering in this sector.”
